DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Johnston on March 3, 2008.

The application has been amended as follows:

IN THE CLAIMS:

1. (Currently Amended) A method of determining specific identifiers fixed onto a pin array of a base component affixed to a primary device wherein each of said identifiers has a plurality of holes therethrough with said base component's pins passing through each of their respective holes aligned therewith such that said identifier can be pressed onto said pin array, a pin detector associated with at least one hole in said identifier for the detection of said aligned pin passing therethrough with each configuration of holes having pin detectors associated therewith being unique to each identifier along any single pin's vertical axis and said identifier being in communication with said primary device, and comprising the steps of:

- a) defining for each of said pins in said pin array a format such that each pin has a unique location within said array of pins;
- b) polling each pin in the array to determine which of said pin locations are detected by said pin detectors;
- c) assembling said detected locations in a set containing individual pin locations in the defined format;
- d) obtaining a first location from the set of detected locations and retrieving from a database a list of known identifiers having one location matching said first detected location;
- e) comparing the remaining locations of each of said retrieved identifiers with those ~~undetected~~ non-flagged locations in the set of detected location in order to find a single identifier whose stored locations comprise a proper subset of the set of detected locations and retaining information about said retrieved matching identifier;
- f) flagging those location in said set of detected locations matching said proper subset of stored locations associated with said retrieved matching identifier as having been accounted for;
- g) repeating steps d through g f until all locations in the set of detected locations have been flagged as having been accounted for or alternatively no more identifier locations in said database of stored identifier locations comprise a proper subset of those non-flagged locations remaining in the set of detected locations; and
- h) in the event wherein no more identifier locations in said database of stored identifier locations comprise a proper subset of those non-flagged locations remaining in the set

of detected locations, initiating a predefined procedure which serves to indicate that an error condition has occurred.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for identifying a user requesting access to a device. The sole independent claim identifies the uniquely distinct features of "comparing the remaining locations of each of said retrieved identifiers with those non-flagged locations in the set of detected location in order to find a single identifier whose stored locations comprise a proper subset of the set of detected locations and retaining information about said retrieved matching identifier; flagging those location in said set of detected locations matching said proper subset of stored locations associated with said retrieved matching identifier as having been accounted for; repeating steps d through f until all locations in the set of detected locations have been flagged as having been accounted for or alternatively no more identifier locations in said database of stored identifier locations comprise a proper subset of those non-flagged locations remaining in the set of detected locations; and in the event wherein no more identifier locations in said database of stored identifier locations comprise a proper subset of those non-flagged locations remaining in the set of detected locations, initiating a predefined procedure which serves to indicate that an error condition has occurred". The closest

prior art, Best (US), discloses a conventional system for identifying users fails to anticipate or render the claimed limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
